

Vaxcyte Announces Closing of \$690 Million Public Offering Including Full Exercise of Underwriters' Option to Purchase Additional Shares

October 28, 2022

SAN CARLOS, Calif., Oct. 28, 2022 (GLOBE NEWSWIRE) -- Vaxcyte, Inc. (Nasdaq: PCVX), a clinical-stage vaccine innovation company engineering high-fidelity vaccines to protect humankind from the consequences of bacterial diseases, announced today the closing of its previously announced underwritten public offering of 17,812,500 shares of common stock at a public offering price of \$32.00 per share and pre-funded warrants to purchase 3,750,000 shares of common stock at a public offering price of \$31.999 per underlying share. This includes the exercise in full by the underwriters of their option to purchase up to 2,812,500 additional shares of common stock at the public offering price per share, less underwriting discounts and commissions. The aggregate gross proceeds to Vaxcyte from this offering were approximately \$690.0 million, before deducting underwriting discounts and commissions and other offering expenses payable by Vaxcyte.

BofA Securities, Jefferies, SVB Securities, Evercore ISI and Guggenheim Securities acted as joint book-running managers for the offering. Cantor acted as lead manager for the offering. Needham & Company and BTIG acted as co-managers for the offering.

A shelf registration statement relating to the offered securities was filed with the Securities and Exchange Commission (SEC), and was automatically effective upon filing on July 2, 2021. A final prospectus supplement and accompanying prospectus relating to the offering has been filed with the SEC and is available on the SEC's website, located at www.sec.gov. About Vaxcyte

Vaxcyte is a vaccine innovation company engineering high-fidelity vaccines to protect humankind from the consequences of bacterial diseases. The Company is developing broad-spectrum conjugate and novel protein vaccines to prevent or treat bacterial infectious diseases. Vaxcyte's lead candidate, VAX-24, is a 24-valent, broad-spectrum pneumococcal conjugate vaccine being developed for the prevention of invasive pneumococcal disease. Vaxcyte is re-engineering the way highly complex vaccines are made through modern synthetic techniques, including advanced chemistry and the XpressCF™ cell-free protein synthesis platform, exclusively licensed from Sutro Biopharma, Inc. Unlike conventional cell-based approaches, the Company's system for producing difficult-to-make proteins and antigens is intended to accelerate its ability to efficiently create and deliver high-fidelity vaccines with enhanced immunological benefits. Vaxcyte's pipeline also includes VAX-XP, a PCV with coverage of 31 strains; VAX-A1, a prophylactic vaccine candidate designed to prevent Group A Strep infections; and VAX-PG, a therapeutic vaccine candidate designed to slow or stop the progression of periodontal disease. Vaxcyte is driven to eradicate or treat invasive bacterial infections, which have serious and costly health consequences when left unchecked.
